

## LOSE FAT FOR GOOD

Recent studies have revealed that a hormone called leptin tells the brain how much fat we have stored, so the body knows how much to burn as fuel. Inflammation can disable the brain's ability to sense leptin, however, sending the body into sugar-burning mode, conserving fat, and sending our cravings through the roof.

While fad diets and weight loss supplements can actually contribute to metabolic dysfunction, the Evolv LifeBar was developed to target the problem of leptin insensitivity.

By combining an ideal mix of healthy fats, proteins, prebiotic fiber, advanced immune support, and whole food vitamins and minerals, the Evolv LifeBar helps the body shift to an efficient fat-burning state, and reducing or eliminating sugar crashes and cravings in the process.
